

HAROON ATIF

Software Engineer | U.S. Citizen | atif.haroon02@gmail.com | 310-882-1753 | GitHub | LinkedIn

EXPERIENCE

Software Engineer | Sileria

Harbor City, CA | Aug 2025 - Present

AlSalah — Cross-Platform Prayer-Times App — Kotlin Multiplatform, Compose, Ktor

- Built a Kotlin Multiplatform app shipping to Android, iOS, and Desktop from one shared codebase, with a Compose Multiplatform UI, Room persistence, and Koin DI.
- Engineered a Hijri calendar that computes month boundaries from per-location lunar crescent visibility, implementing the peer-reviewed Odeh (2004) astronomical criterion on top of custom sun and moon ephemeris code.
- Wrote a 150+ test validation suite checking the astronomy engine against NASA, JPL HORIZONS, and textbook reference values, plus end-to-end checks against 22 years of published records.
- Built the backing Ktor server (Netty, Exposed ORM, SQLite, HikariCP) serving prayer-time and scheduling endpoints, packaged as a WAR and deployed to Tomcat 11.

Internal Tooling

- Built Python observability tooling to monitor application health, giving the team real-time visibility into system status and faster fault detection.

IT Systems & Operations Manager | Glazey Glass Company

Los Angeles, CA | Jan 2025 - Aug 2025

- Built an automated bid pricing system in Python that calculated job costs and flagged bids below a 2x cost-recovery threshold, giving estimators a reliable floor on every project.
- Wrote custom automation for QuickBooks reporting that pulled weekly cash-flow summaries, improving forecast accuracy and cutting manual accounting time by several hours per month.

Information Technology Analyst | City of Los Angeles ITA Citywide Help Desk

Remote | Apr 2023 - Apr 2024

- Rebuilt Amazon Connect and Lex bot call flows with latency and routing failures, reducing dropped calls for a contact center handling thousands of requests per day.
- Traced recurring system failures to root cause with engineering teams and shipped scripted fixes that kept the same incidents from reopening.
- Resolved over 100 support tickets daily across multiple departments while maintaining a 95% customer satisfaction rating.

PROJECTS

AI-Powered Web Automation Agent | Python, Playwright, FastAPI, MCP

Oct 2025

- Built an autonomous browser agent using LLM-driven planning (MCP), with state recovery and retry logic so multi-step web tasks complete reliably without manual intervention.
- Exposed task execution through a FastAPI interface so other systems could trigger data extraction and form submission via API calls, with no code changes required per task.

MITRE Embedded Cybersecurity Competition | C, Python

UC Irvine | Apr 2025

- Rewrote vulnerable firmware routines in C and enabled stack canaries and MPU memory protections, closing buffer overflow and unauthorized flash access vulnerabilities in the competition scenario.

EDUCATION

Western Governor's University | B.S. Computer Science

Oct 2025

University of California, Irvine | B.S Computer Science

2023 - 2024

Los Angeles Harbor College | A.S. Physics & Mathematics | Summa Cum Laude, GPA: 3.95

Jun 2023

TECHNICAL SKILLS

Languages: Kotlin, Python, C/C++, TypeScript, JavaScript, Java, SQL, Bash

Frameworks: Kotlin Multiplatform, Compose Multiplatform, Ktor, FastAPI, Room, Koin

Backend & Data: REST APIs, Exposed ORM, SQLite, Microservices, CI/CD concepts

Testing & Cloud: Unit & integration testing, validation suites, Git, AWS, Docker, Kubernetes, Linux
